Test Comments: Trial was located under pivot irrigation and intensively managed. Excess April moisture caused replant on many nearby corn acres. Irrigation was applied in July, 2.5"; August, 1.7"; and September, 0.8" for a grand total of 5". Ears were well pollinated with kernel fill to the tips. At harvest, plant health was excellent with virtually no lodging or disease. Boron was applied.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
