Test Comments: *Planting conditions were good as well as emergence. Plot was uniform almost all year. Went through a short dry spell in June which helped plants root down. Nick stated, "I think the corn ran out of nitrogen later in the season." Stalk quality and plant health was still good at harvest and grain was drying down nicely. There were very few diseases that appeared to be hurting these corn products.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
