Test Comments: *This site was planted into a clean not-till seedbed, it had a very uniform stand. This location has a deep layer of topsoil which helped corn plants survive the heat this summer. This site received spotty rains in June and July. Corn plants stood well at harvest, but were leaning. October and November brought 18" of precipitation that delayed area harvest. Frozen ground was needed to harvest here.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
