**Test Comments:** This is a new central Missouri FIRST site. Emergence was quick and uniform. Record heat in May preceded a dry bias. Taylor, our host grower, mentioned it was "extremely dry after pollination". An August 6 wind event, with sustained 60 mph winds for an hour caused stalk lodging and greensnap of some products to cause reduced and varying yields. Taylor said of the trial, "it had so much potential".

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
